

Testimonial about IBA Proton Therapy |

*"IBA has made from the cyclotron manufacturing company a great company. They really have understood what the issues are in terms of building up a Proton Radiation facility. It's complex and **it just goes beyond producing protons; it's an integration of all of the treatment processes in radiation therapy.***

*So, at Boston (MGH), it was more of an experiment in terms of bringing a machine in a hospital center. But now, IBA is more like a radio therapy delivery system company. **They do understand what the real needs are in a Proton radiation therapy clinic.** By that, I mean that it's not only putting together a delivery system but **integrating** all the components like **facility management systems, the different control systems, imaging the patients,** especially nowadays that we make Image Guided Radiation Therapy. Well, with IBA, **all of that is going to be perfectly integrated.**"*
